

# FullContact V1 API Schema Changes

## Overview

We are in the process of refactoring the FullContact V1 API response schema in an effort to make the data you use more organized and consistent. We've standardized field names across social profiles, reorganized information, added new fields, and removed fields we will no longer be providing.

The updated schema will go live on January 16th, 2011. Please update any code affected by these changes accordingly. We apologize for any inconvenience these changes may cause you.

## Standard Social Profile

Social profile data has been standardized to conform to the following format and naming conventions.

### Example:

```
socialProfile:
{
  "url": [public URL to social profile],
  "id": [user Id of profile],
  "type": [old type - to be deprecated],
  "typeId": [typeId = standardized type],
  "typeName": [friendly typeName],
  "username": "[user's username]",
  "bio": [short tagline/bio/headline on network],
  "rss": [RSS feed, if available]
  "following": [how many people person is following]
  "followers": [how many people are following person]
}
```

## digitalFootpring

We've added a **digitalFootprint** node to the response, which contains information such as *Klout* and *PeerIndex* scores and topics. All topic and score related information is being moved to this node.

### Klout Score Types

- **general**
- **amplification**
- **reach**
- **network**

### PeerIndex Score Types

- **general**
- **authority**
- **audience**
- **activity**

### Example:

```
digitalFootprint:
{
  "scores":
  {
    "value":45,
```

```

        "provider": "klout",
        "type": "general"
    },
    {
        "value": 51,
        "provider": "peerindex",
        "type": "general"
    }
},
"topics":
{
    {
        "value": "techstars",
        "provider": "klout"
    },
    {
        "value": "angel investing",
        "provider": "peerindex"
    }
}
}

```

## Relocating Website URLs to `contactInfo.websites`

The following fields will now be found under `contactInfo.websites`, which contains a collection of non social profile urls associated with this person.

- `angellist.blogUrl`
- `gravatar.blogUrl`
- `twitter.externalUrl`
- `github.blogUrl`

### Example:

```

"contactInfo": {
    "familyName": "Lorang",
    "givenName": "Bart",
    "fullName": "Bart Lorang",
    "websites":
    [
        "http://www.bartlorang.com"
    ]
}

```

## Field Name Changes and Removals

The following fields have been removed or renamed:

- We're removing the `birthday` and `facebookUsername` fields from the *Facebook* social profile.
- We're removing `profile_url`, `facebookUsername`, `twitterUsername`, `facebookId`, `created_at`, `known`, `slug`, and `time_zone` from the *Plancast* social profile.
- We're removing `profileId` from the *Google Plus* social profile. The `title` field is going to be renamed to `bio`.
- We're removing `twitterUsername`, `twitterScreenname`, `twitterId`, and `extrenalUrl` from the *Twitter* social profile.
- We're removing `connections` on *LinkedIn*. We're adding `followers` and `following`. The `headline` field is going to be renamed to `bio`.
- We're removing `message` from *Tungle.me*.

- We're removing the **icon**, **about**, **name**, and **user\_id** fields from *Digg*. The **about** field will be renamed to **bio**.
- We're removing **short\_bio**, **name**, **ext\_api\_urls**, **sessions\_attending**, **sessions\_speaking**, **sessions\_tracking**, **attending**, **speaking**, and **tracking** from *Lanyrd*. The **about** field will be renamed to **bio**.
- We're removing the **myspaceUsername** field from the Myspace social profile. The **id** field will now contain the actual Myspace id instead of the entire string.
